CO-Booth Smart Pods

2024

The Evolution of Soundproof Office Pods

In 2001, a visionary designer patented for the "phone booth furniture with a seat" (AT44343S), marking the first combination of functionality and comfort.

A significant breakthrough occurred in 2010 with the introduction of the "phone booth with a seat and soundproof door" (KR300601520S). This design revolutionized the field by integrating a soundproof door.

In 2014, the emergence of the "telephone booth" design (USD732691S1) further enriched the scope of workspace design, emphasizing the integration of aesthetics and functionality.

In 2018, CO-Booth's "telephone booth" (EU0052530690003S) introduced the concept of combining minimalism with functionality, Since then, the role of office telephone booths has evolved from merely isolating internal and external noise to multifunctional soundproof workstations that meet new aesthetic requirements and adapt to new work styles. Today, hundreds of companies worldwide are engaged in this thriving industry.

Safer and More Natural CO-Booth Smart Pods

In 2024, industry pioneer introduced the Framery Smart Pods series, leading a new trend of black, industrial-style metal entryways for office pods.

During the development of its smart soundproof pods, we became deeply aware of the security risks associated with the transfer and processing of personal information. Consequently, we resolutely prioritized user privacy and security, opting not to transfer or process user data. despite the technical feasibility of doing so.

We redeveloped multiple key technologies to enable centralized intelligent control of various functions within the smart pods via a CPU and high-resolution touchscreen, all without involving user data. These functions include ventilation, lighting, human presence detection, occupancy indicator , and adjustable desk.

Adhering to a design philosophy that embraces nature, Our smart pods create a comfortable interior environment for users. They incorporate a high color rendering index lighting system that simulates natural daylight and use natural birch plywood and wool materials to foster a natural and cozy work atmosphere. Compared to the monotonous, fixed industrial design and dull black entryways of office pods, we holds the largest number of protected "minimalist" design patents in the office soundproof office pod industry has introduced diversified entryway designs. This makes our smart pods more minimalistic, warm, and natural, providing users with more choices.

Our smart pods offer users a comfortable, natural, and diversified work environment while protecting their privacy, making them a unique solution in the market for smart soundproof pods.

CO-Booth Smart Pods / Smart Feature

All CO-Booth Smart Pods can be equipped with excellent configurations, making comfortable ventilation and lighting easily at your fingertips.

Occupancy Indicator
Installed outside the pod, it allows you to see from a distance whether the booth is vacant or reserved.

Ceiling Light
Color temperature 4000 K, CRI > 90, 3400lm, desktop illuminance over 500lux.

Video Light
Color temperature 4000 K, CRI > 90, 1000lm, face illuminance up to 400lux. Supports preset and manual adjustment of lighting modes via touchscreen.

Intuitive UI
The high-resolution touchscreen simplifies the setup and adjustment of the ventilation and lighting systems within the soundproof pod, while also enabling you to schedule pod time from anywhere in the world.

offmax ®
CO-Booth Smart Pods are built sustainably and engineered to last, refusing the monotonous industrial black. This is re ected in the construction of   its door system. Not only are the door locks and hinges made of industry-leading products but there are also multiple colors to choose from. Furthermore, the door frame and door handle made of HPL veneer offer even more color options.

Frameless Full-Glass Door

The design of the frameless full-glass door is sleek and modern, with a sense of technology. It can minimize the visual sense of oppression for users in enclosed soundproof pods with limited space, making the entire space appear more transparent and natural. This is particularly important for soundproof pods that require unobstructed visual lines.
At the same time, it is easy to clean and maintain.

Natural Birch Plywood Door

Door made with natural birch plywood materials not only create a workspace that feels even closer to nature for the soundproo ng pod but also have a layered structure that effectively blocks sound transmission, thus providing excellent soundproo ng performance.

The frameless full-glass door lock chosen has been certi ed by the EN12209 standard and has passed a 200,000-cycle test of handle movement.
The lock body and handle are available in three colors:
natural anodized,
black, and
white powder coating.

The height-adjustable seat offers pure natural wool fabric, providing a soft, smooth, and comfortable touch. It offers excellent sitting experience.

The seat cushion is lled with a custom-shaped foam, boasting excellent elasticity and cushioning performance. It can adapt to the user's body curves, providing personalized support and comfort, and reducing fatigue caused by prolonged use.
Additionally, the seat and sofa surface can be customized with polyester double-structure fabrics in various colors according to the designer's requirements, offering versatile color options.
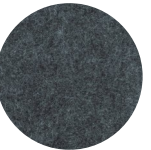

Sofa with more comfortable sitting experience can not only make long-term work more pleasant but also play a signi cant role in improving the acoustic environment inside the soundproof pod.
